DURABILITY

Our goal is to deliver best-in-class durability on every product for every customer.

We go beyond ANSI and BHMA testing standards and subject our products to extreme abuse cycling, mimicking what our products experience in real-world, high-traffic and high-abuse environments.

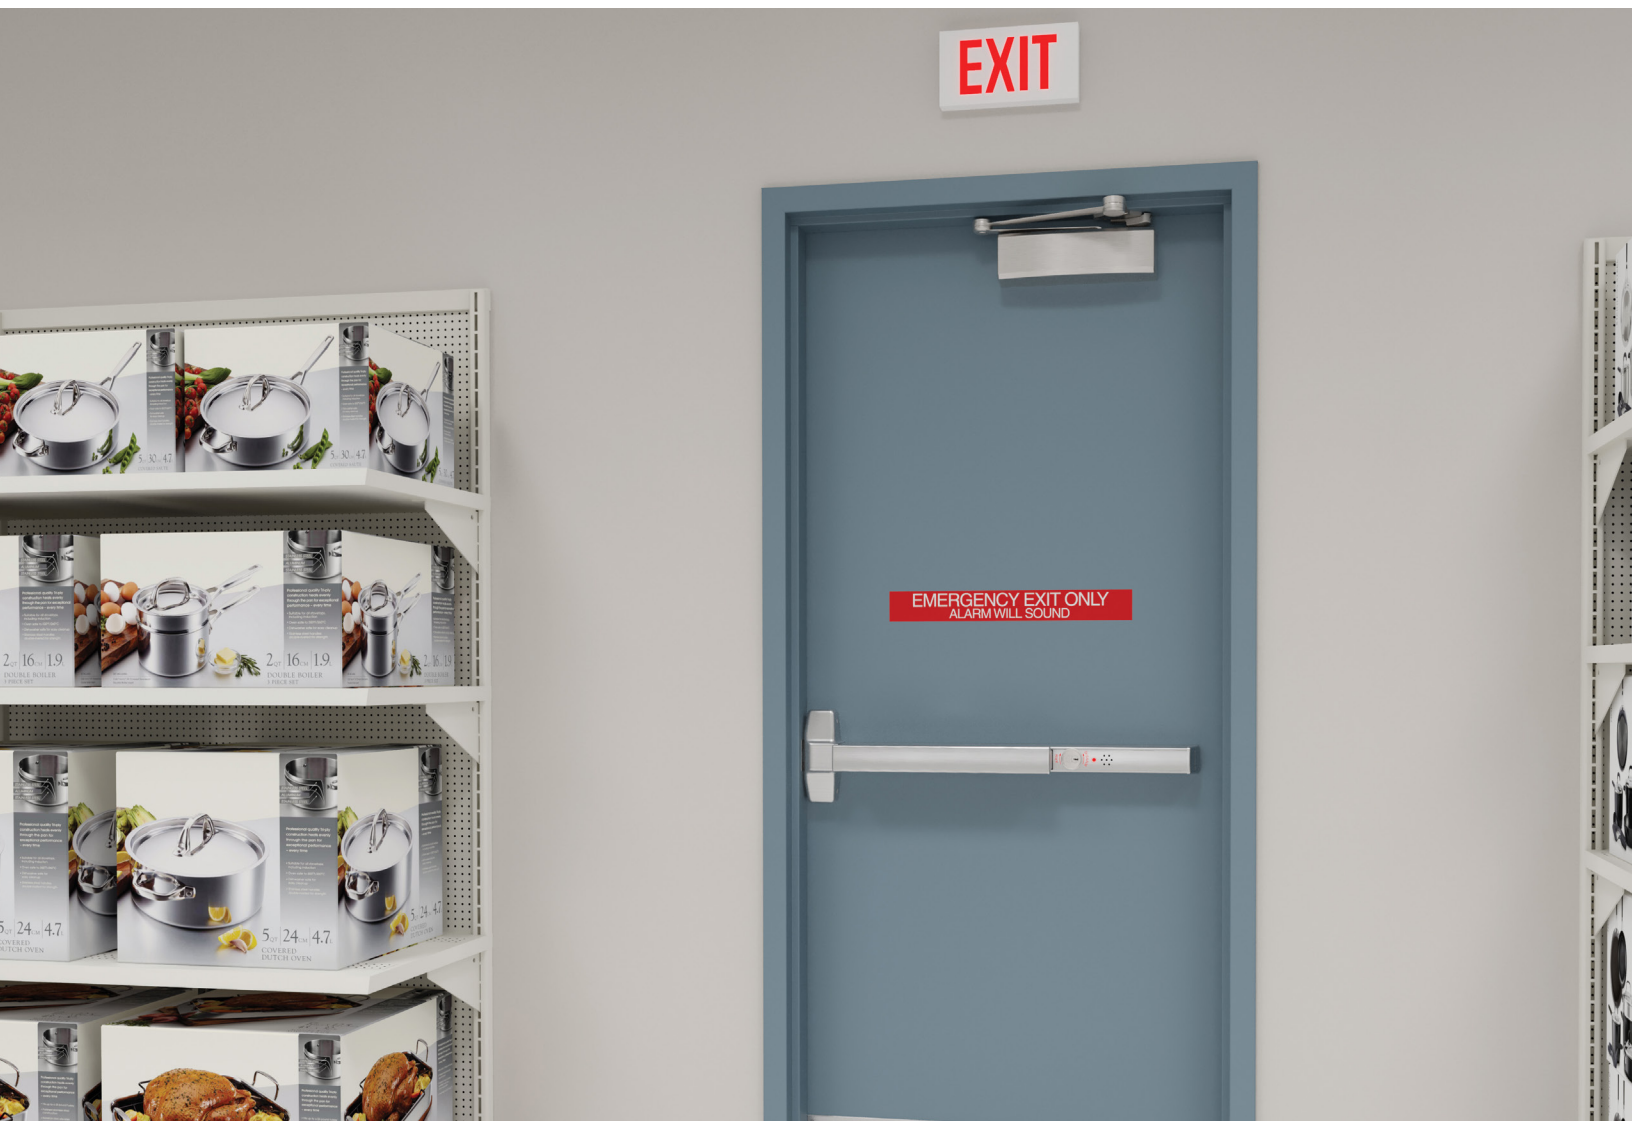

Our closers are primarily built with cast iron due to its superior strength and longevity over other base materials. The remainder are cast aluminum and provide comparable durability at a more affordable price.

Finally, we add a powder coat finish—the highest performance finish option on the market—to protect our products from corrosion and the effects of daily wear-and-tear.

PRECISION

For over a century, LCN's manufacturing processes have included measures such as honing and centerless grinding to achieve tolerances **less than the width of a human hair**. Tighter tolerances during the manufacturing process result in more consistent performance and predictable adjustments—saving customers time and money.

Material control is foundational to this consistent performance and strength, which is why LCN requires suppliers to show certification that their raw materials adhere to our brand's rigorous standards.

TRUST

Since opening our doors in 1925, LCN's pioneering spirit remains evident in inventions like the first overhead concealed closers and our flagship 4040XP. This spirit of innovation allows our engineers to never stop improving and fuels our ability to offer customers a sustained roster of state-of-the-art products they can trust. Beyond our products, we are committed to supporting our customers with

regional sales offices, field specialists, and technical support specialists, ready to provide expert advice and troubleshooting support. Whether you need help with installations, product service, or hardware selection, we're here to help.
