4000 Series

Surface mounted closers

Delivering reliable solutions for over a century

Slamming church doors are the beginning of LCN's rich history

In 1877, our founder was hired to solve this problem of a Boston church's swinging doors that slammed noisily shut. It led to the invention of the world's first door check. His innovation continued, leading to the formation of the LCN brand in 1926. A passion for quality has guided LCN ever since and continues to set it apart from other brands.

Manufactured with pride in Princeton, Ill., U.S.A., by our highly skilled and tenured craftsmen. Our solutions are specifically designed for enhanced durability, consistency and longevity. From meticulous engineering to strict quality control, LCN accepts no less than the best.

Every person in the LCN plant plays a role in the rigorous quality control process

This level of shared commitment is why, in part, our Princeton plant was honored with the 2017 Manufacturing Leadership Award from the Manufacturing Leadership Council. The award recognizes manufacturing companies that are shaping the future of global manufacturing by delivering clear and compelling value, return on investment and other tangible outcomes. With millions of door closers installed in facilities across the world, you can be confident in choosing LCN.

Features that set the 4000 Series apart

- Double heat-treated pinions gives proper hardness and strength to the parts where they need it
- Liquid X fluid performs in temperatures from -30°F to 120°F, reducing the need for seasonal adjustment
- Full complement bearings help withstand abuse in real-world applications because of increased surface contact
- The LCN Green Dial provides easy visual adjustments and indicator to dial in the strength needed for any environmental condition

Adjustments

There are several design features that make installation or adjustment of the 4040XP easier and more intuitive.

- **LCN Green Dial** provides a visual reference of the spring power setting, taking the guesswork out of spring power adjustments.
- **Additional adjustments** can be made to the back check, main, and latch regulation valves which are labeled for easy identification.
 - Labels correspond to a diagram with door swing zones located on the closer body.
- **Patented positive stop feature** on all regulation valves. The improved staking feature prevents the screw from being backed out and causing accidental damage to the product.
- The patented regulation valve indicators provide visual color indicators of how far a screw is backed out—the more visible the component, the faster the speed.
- This makes adjustments simpler and more intuitive.
- **New QR code** that provides on-the-spot access to interactive installation and maintenance instructions and tech support.
